## Classic and Contoured XS Cushions

Classic

Contour

Providing *Total Pressure Management*®—*pressure relief, reduced shearing and ventilation* to control heat and moisture—the key to the prevention and treatment of pressure sores, *our new Stimulite Classic and Contoured XS Cushions feature a softer top layer of flexible honeycomb for individuals with extra sensitive skin.*

Made from an advanced medical grade material that's *antibacterial, antifungal and odor resistant*, these *lightweight, machine-washable* cushions help promote clean, healthy skin and are a breeze to care for.

Stimulite Honeycomb distributes weight uniformly to relieve pressure while providing exceptional stability. The honeycomb cells contour to body shape and flex with movement to absorb shock and prevent tissue trauma. Perforations in the honeycomb cell walls circulate air and evaporate moisture.

The *Stimulite Classic XS Cushion* consists of three layers of flexible, fusion-bonded honeycomb, each a different firmness, enabling bony protuberances to sink freely into the cushion while supporting the surrounding anatomy. Firmer honeycomb is used to create internal side bolsters for added stability. A ventilated cover works with the honeycomb to keep people cool and comfortable. *Ideal for individuals who require a higher level of skin protection but have difficulty transferring on contoured surfaces.*

*Designed for paraplegics, quadriplegics and other individuals requiring a higher level of positioning and pressure management*, the *Stimulite Contoured XS Cushion* is comprised of multiple layers of flexible, fusion-bonded honeycomb specifically engineered with soft and firm areas. A rear dish provides optimal pelvic positioning for improved posture and stability, featuring a "sweet spot"—a softer honeycomb that contains the ischials and coccyx—and helps prevent hammocking. The sweet spot gradually transitions to a firmer honeycomb for added support. Adductors and an abductor comfortably contain the legs, without making transferring difficult. A breathable cover features a wallet pocket, which can be concealed underneath the cushion.
