- Wheelchairs
- Tilt-in-Space
- Pediatric wheelchairs

DAILY LIVING AIDS

- Toilet Seat and Bath products
- Waterproofing
- Custom Work

*"Our products are a direct
result of the needs of
those we serve."*

Postural Evaluation

The simulator is used to accurately establish custom manufacturing criteria of a posture assistive device. Due to its comprehensive adaptability, this tool can simulate various adjustments as well as component interaction.

It also allows determining the components, support and corrective needs as well as establishing the anthropometric measurements. The result of these specifications leads to the manufacturing of a customized technical aid.

Premium Back

Our Premium adjustable-tension backrest has been designed to provide additional comfort and adjustability for clients with spinal deformities.

Features

Autolock Buckles

Optional swing-away thoracic supports are adjustable in height, width, and depth. Features a zipper opening for rapidly inserting wedge or FIPS.

HP2 Back

Modern shape, dynamic design, and color stand out as HP2 backrest features. It also offers thoracic supports that can be adjusted vertically, laterally, and at an angle.

The HP2 backrest offers various combinations of depth, height, angle, and width for optimizing posture, range of motion, and user comfort.

NEW

Valeo™ Backrest

Valeo is Physipro's newest backrest. It features an overall enhanced design that includes new thoracic supports, easy to use mounting system that requires minimal effort, dorsal wedges, lumbar wedge and many options!

Axis™

Axis gives you options! The Axis innovative strapping system allows you to create instantly, a lumbar support. It can be continually adjusted to the most appropriate position over the course of a progressive illness or when postural abnormalities increase.

A unique thoracic support system is available for optimal positioning. It also features an unlimited selection of heights and widths. The Axis is not only a tension adjustable backrest it's a complete backrest system that helps you meet the specific needs of the user!

Axis gives you options!

PHYSIPRO

Physipro Seating

Physiair™ cushion

The Physiair is made of *high-resilience urethane foam*. The foam is grooved on half of the thickness in order to make cubes that are like individual springs (like some mattresses on the market). This allows *cells to operate individually* and to closely follow the contours of the body.

Ultra Cushion

Comfortable and clinically effective positioning cushion. The Ultra cushion's shape allows for better control of the pressure distribution on bony prominences, while ensuring controlled weight distribution over the cushion surface.

Zero Pressure Cushion

The cushion shapes of the Zero-Pressure are molded to reduce pressure on bony prominences and to ensure controlled weight distribution over the entire cushion surface.

Resolve® Cushion

The Resolve® cushion is made with layers of dispersion foam and comfort foam. With shape components, it provides optimum postural support and comfort.

LXA Cushion

Moisture and shearing are not problems with the LXA cushion, made of a combination of low-density urethane foam and a waffle gel.

C3S cushion

Provides a durable support for clients with mild postural needs.

Brio cushion

The BRIO cushion is a new basic cushion that is primarily for individuals who require moderate positioning and pressure relief.

Ellipse cushion

A new high quality cushion offering optimal stability and an even distribution of weight across the surface of the cushion. Reduces pain, caused by sliding, maintains the pelvis in place and allows a micro massage of the body.
