

EASY FIT

UNCOMPROMISING COMFORT AND PERFORMANCE

The comfort of a custom cushion, from day one.

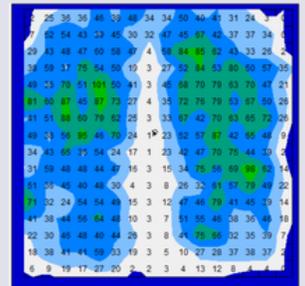

The EASY FIT is an ergonomic cushion designed to deliver the comfort and support of a custom-made model, while maintaining the flexibility of a standard product.

Its anatomical shape, developed from real postural data and validated through pressure mapping tests, ensures even pressure distribution and long-lasting pelvic stability and alignment.

A design rooted in the science of positioning

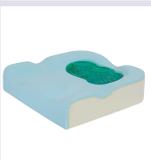

Every contour and curve of the EASY FIT comes from an in-depth analysis of various body shapes and common pressure zones. **The result:** a natural seating surface that promotes pelvic stability, prolonged postural comfort, and pressure point prevention, without the need for customization.

Three versions to meet different needs

Standard with memory foam: provides stable support, ideal for prolonged sitting.

Gel finish: allows pelvic immersion and offers targeted protection for high-risk pressure areas.

Viscoelastic foam: increases body contact surface, reduces skin interface pressure, and enhances overall comfort.

A Smart Clinical Choice

- Optimal postural support without custom molding
- Effective pressure distribution
- High-density materials for increased durability
- Consistent comfort over time
- 26 standard sizes to fit all wheelchairs and clinical needs
