| SEAT-TO-FLOOR<br>HEIGHT | 13" | 6       | NA  | NA  | NA  | POSITION<br>OF THE TILT<br>SYSTEM |
|                         | 14" | NA      | 6   | 6   |     |                                   |
|                         | 15" |         | 5   | 5   | 6   |                                   |
|                         | 16" |         | 4   | 4   | 5   |                                   |
|                         | 17" |         | 3   | 3   | 4   |                                   |
|                         | 18" |         | 2   | 2   | 3   |                                   |
|                         | 19" |         | 1   | 1   | 2   |                                   |
|                         | 20" | NA      | NA  | 1   |     |                                   |
|                         |     | D5"     | D6" |     |     |                                   |
|                         |     | CASTERS |     |     |     |                                   |

The diagram illustrates the mechanical components of the tilt system. It shows a blue metal arm with several adjustment points. Numbered callouts 1 through 6 identify specific parts: 1 points to a pin at the bottom of the arm; 2 points to a roller at the pivot; 3 points to the main pivot joint; 4 points to a roller on the horizontal shaft; 5 points to the top pivot of the horizontal shaft; and 6 points to a bolt on the upper part of the arm.

 **NOTE :** D5"/D6" = "D" means the use of a dynamic fork.

**STEP 3:** Define the tilt angle according to the frame format (STEP 1), the position of the tilt system (STEP 2) and the type of armrest

|                                                                                     |                                   | FRAME               |               |       |               | ARMREST |

## Standard 4 wheels NEOX

### STANDARD 4 WHEELS NEOX - DETERMINE THE TILT ANGLE

STEP 1: Define the frame format according to the seat depth.

|             |     | FRAME |       |
|-------------|-----|-------|-------|
|             |     | SMALL | LARGE |
| SEATH DEPTH | 14" | Small | NA    |
|             | 15" |       |       |
|             | 16" |       |       |
|             | 17" |       |       |
|             | 18" |       |       |
|             | 19" | NA    | Large |
|             | 20" |       |       |
|             | 21" |       |       |
|             | 22" |       |       |

STEP 2: Define the position of the tilt system according to the seat-to-floor height and the wheels diameter

|                      |     | WHEELS  |    |    |     |     |                                                                                        |    |     |    |     |     |     |    |
|----------------------|-----|---------|----|----|-----|-----|----------------------------------------------------------------------------------------|----|-----|----|-----|-----|-----|----|

 NOTE: 6" = This caster is arranged in a low configuration.

 NOTE: D6" = "D" means the use of a dynamic fork.

STEP 3: Define the tilt angle according to the frame format (STEP 1), the position of the tilt system (STEP 2) and the type of armrest

|                                                                                     |                             | FRAME |               |       |               | ARMREST |
|-------------------------------------------------------------------------------------|-----------------------------|-------|---------------|-------|---------------|---------|
|                                                                                     |                             | SMALL |               | LARGE |               |         |
|                                                                                     |                             | T     | U / Flip Back | T     | U / Flip Back |         |
|  | POSITION OF THE TILT SYSTEM | 6     | 21°           |       | 20°           |         |
|                                                                                     |                             | 5     | 26°           |       | 26°           |         |
|                                                                                     |                             | 4     | 32°           |       | 30°           |         |
|                                                                                     |                             | 3     | 38°           |       | 36°           |         |
|                                                                                     |                             | 2     | 45°           |       | 43°           |         |
|                                                                                     |                             | 1     | 45°           |       | 45°           |         |
| TILT ANGLE (+/- 1°)                                                                 |                             |       |               |       |               |         |

STEP 4: To guarantee a minimum stability of 10° in the least stable configuration, validate the maximum tilt angle according to the angle of the backrest and the weight of the user

| BACKREST ANGLE | 75 KG (165 LB) | 115 KG (250 LB) | 160 KG (350 LB) |
|----------------|----------------|-----------------|-----------------|
|                | MAX TILT ANGLE | MAX TILT ANGLE  | MAX TILT ANGLE  |
| 90°            | 46°            | 46°             | 22°             |
| 95°            | 46°            | 46°             | 22°             |
| 100°           | 46°            | 45°             | 22°             |
| 105°           | 46°            | 43°             | 22°             |
| 110°           | 46°            | 40°             | 22°             |
| 115°           | 46°            | 40°             | 22°             |

## Dynamic Tilt NEOX

### DYNAMIC TILT CONFIGURATION

#### LIMITATION OF THE TILT ANGLE ACCORDING TO THE CYLINDER POSITION AND THE USER WEIGHT (APPLICABLE FOR "T" ARMSETS)

| USER WEIGHT                                                                                       |                 | CYLINDER<br>POSITION | MAXIMUM TILT ANGLE                                | CYLINDER POSITION<br> |
|---------------------------------------------------------------------------------------------------|-----------------|----------------------|---------------------------------------------------|----------------------------------------------------------------------------------------------------------|
| STANDARD                                                                                          | HEAVY DUTY      |                      |                                                   |                                                                                                          |
| Less than 165 lb                                                                                  | 220 lb - 264 lb | Position 1           | 30°<br>(26° for 14" and 15" seat-to-floor height) |                                                                                                          |
| 165 lb - 210 lb                                                                                   | 264 lb - 308 lb | Position 2           | 26°                                               |                                                                                                          |
| 210 lb - 254 lb  | 308 lb - 350 lb | Position 3           | 22°                                               |                                                                                                          |

 **NOTE:** Cylinder position 2 can be used for an occupant of 210 lb at 254 lb if the tilt angle of 22 degree is insufficient. The force required to lift the occupant will be slightly higher.

#### ADDITIONAL LIMITATIONS OF TILT ANGLE ACCORDING TO THE POSITION OF THE TILT SYSTEM (APPLICABLE FOR "U"/FLIP BACK ARMSETS)

| SEAT-TO-FLOOR HEIGHT | MAXIMUM TILT ANGLE |
|----------------------|--------------------|
| 13"                  | 10°                |
| 14"                  | 12,5°              |
| 15"                  | 16°                |
| 16"                  | 21°                |
| 17"                  | 25°                |
| 18"                  | 25°                |
| 19"                  | 30°                |

 **NOTE:** Note that this limitation does not include a possible interference with the armpad. Due to interferences that limit the tilt angle, the use of "U" / Flip Back armrests is not recommended for the Dynamic Tilt model with low seat-to-floor height (14" to 16").
